BidSync™ Source
POWERED BY Periscope

Cloud-Based Sourcing for the Public Sector

In public procurement, realizing best value extends beyond protecting the budget. BidSync Source helps to improve internal customer satisfaction, decrease costs of procuring goods and services, and improve data for balanced decision-making.

Extensive Vendor Database

BidSync provides access to a qualified database of 400,000+ nationwide suppliers. Limiting solicitations to customer's list of suppliers is no longer necessary. Our database of qualified suppliers can help increase solicitation exposure, supplier response and competition, which help customers to lower procurement costs.

A Richer Supplier Experience

BidSync Source helps customers closely manage supplier relationships. Suppliers are able to register and manage their accounts via a simple, no-cost online process. This ensures that contact information, qualifications, and certifications are accurate; thereby allowing customers to award and track contracts based on capabilities, Environmentally Preferred Purchasing goals and diversity (DVBE, SB, WBE, HUB, etc.). Suppliers' profiles also contain commodity codes (NIGP, NAICS or UNSPSC) to classify their product or service. When customers release a solicitation, suppliers are automatically notified of the bid opportunities that match their profile.
